

ARCHITECTURAL DIGEST

Tour NYC's First Zaha Hadid–Designed Apartments

The building and its beautiful interiors were designed by the Pritzker Prize–winning architect with views overlooking the High Line and midtown Manhattan

December 22, 2015 | By Nick Mafi

New York City residential buildings are, more often than not, both expensive and rigid in design. With apartments ranging from \$4.95 million to \$50 million in Zaha Hadid's soon-to-be-completed 520 West 28th Street, the building fits the typical price tag for Manhattan real estate. Yet the structure's dynamic curves and continuous lines distinguish it from the surrounding architecture. Located in the trendy, art-centric neighborhood of West Chelsea, the 11-story building is being constructed next to the popular High Line park, which stretches from the recently opened Whitney Museum at its south end to the Hudson Yards

development at its north. For Hadid—who was the first woman to win the coveted Pritzker Prize—the 39-unit luxury building is an exciting moment in her storied career, as it will be the Iraqi-born architect's first residential project in New York City.

Within each unit, Hadid's flair for sleek, contemporary aesthetics is apparent. The kitchen, for example, includes an island of sculpted white marble designed by the architect herself. White oak flooring throughout the apartments adds warmth and texture, while balconies overlook stunning views of the High Line and midtown Manhattan. Master bedroom suites feature expansive private balconies with glass doors that slide open at the push of a button.

Apartments range in size from 1,691 square feet to 6,618 square feet, with two- to five-bedroom options. The building includes a 75-foot-long pool and a gym, along with a spa featuring a cold plunge pool, waterfall showers, a sauna, a steam room, lounges, and massage treatment beds. Looking to throw a mini-viewing party with close friends and family? The building also boasts a private 12-seat IMAX screening room. 520 West 28th is expected to be completed in early 2017.
